

Infosheet

Serverinstallation

Requirements on the customer side

For a smooth process we need the following data / information:

A Windows server to which you can connect via VPN, with Office applications installed. A Windows user with local administrator permission.

- Access to the SQL Server via Microsoft SQL Server Management Studio (should run via Windows Authentication) with server name, server type, authentication, login and password.
- A mail server for sending the e-mails.

Basically, we do *no* backups ourselves - this is up to you.

System requirements
